Owned By:
Kaleb Hunt,
Wellington, Kan.

His sire was one of the highest selling bulls in the 2012 sale to Larry Angel for \$4,700. 2034 was used as a cleanup bull in our herd. 2034 is a big, stout bull that will add pounds. 2034 had a weight of 1,800 lbs as of 1/15/2015. His dam was one of Kaleb's show heifers. She is a large volume cow with lots of milk and a perfect udder.

DA Lead On 3104's sire is Connealy Lead On, a proven, maternal, medium-framed bull. He excels in docility with added scrotal circumference. His progeny continue to impress in all phases, ranking in the top 15% of the Angus Sire Alliance for total profit and the top 20% maternal index. DA Lead On looks a lot like his sire and we think he will make a great herd bull.

Stenberg Coalition 509 progeny are robust, big barreled, high-capacity cattle that have unsurpassed early accelerated growth yet possess a unique early shut down with early puberty resulting in reduced mature size. The ultra-feminine, big-ribbed daughters have excellent udders, increased pelvic sized, extra depth and internal dimension to make efficient range replacement females.

Chisholm Trail Angus Association

Lena Hommertzhaim (left) and Sandra Utter Levering make breeding season a breeze for Duncan Angus, Winfield. The two of them work for ABS and A.I. all of Duncan's cattle in two days. Heifers on the first day and cows on day two. This saves Marvin and Yvonne Duncan a lot of time and no late nights checking heat cycles.

4034 is a real performance bull. He had an adjusted weaning weight of 819 lbs. and a yearling adj. of 1427 lbs. 4034 is sired by BC Eagle EYE 110-7. Eagle Eye's progeny are noted for exceptional body depth, soundness and muscle shape at an early age. This bull is no exception. Dam is a full sister to Hunts 0597 Traveler 2034 in this sale. She is an outstanding 2-year-old that has a Weaning ratio of 110 and Yearling ratio of 110 on her 1st calf. She is a beautiful wedge-shaped cow that has an ideal udder and lots of milk.

Bulls with a birth EPD of under 1.0 and WW EPD over 50 are really hard to find but here he is. Not only impressive to look at with great numbers but a really nice disposition to go along with it. Recommended for heifers or cows. Fertility tested. No creep.

Calving ease combined with explosive growth. Lots of red meat in this one. Recommended for heifers or cows. Fertility tested. No creep.

Expected Progeny Differences (EPDs)

Birth Weight EPD (Birth), expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

Weaning Weight EPD (Wean), expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

Maternal Milk EPD (Milk) is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

Yearling Weight EPD (Year), expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

\$Value Indexes

\$Values are multi-trait selection indexes expressed in dollars per head, to assist commercial beef producers by adding simplicity to genetic selection decisions. A \$Value has meaning only when used in comparison to the \$Value of another animal. For example, just as with EPDs, variation in \$Values between animals indicates average expected differences in the relative value of progeny if random mating is assumed and the calves are exposed to the same environment.

\$Values			
\$W	\$F	\$G	\$B
+21.28	+13.60	+12.53	+25.32

Weaned Calf Value (\$W): an index expressed in dollars per head, is the expected average difference in future progeny performance for preweaning merit. \$W includes both revenue and cost adjustments associated with differences in birth weight, weaning direct growth, maternal milk, and mature cow size.

Feedlot Value (\$F): an index expressed in dollars per head, is the expected average difference in future progeny performance for postweaning performance compared to progeny of other sires.

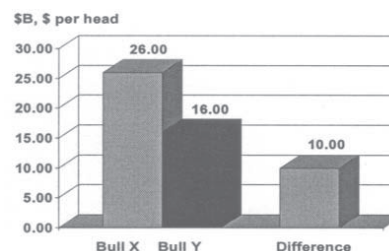

\$Values have meaning when used in comparing the relative merit or ranking of two individuals. For example, Bull X has a \$B value of +26.00, and Bull Y has a \$B value of +16.00. If these bulls were randomly mated to a comparable set of females and the calves were exposed to the same environment, on the average you would expect Bull X's progeny to have a +10.00 dollar per head advantage in postweaning performance and carcass merit over Bull Y's progeny (26.00 - 16.00 = +10.00 per head)

Grid Value (\$G): an index expressed in dollars per head, is the expected average difference in future progeny performance for carcass grid merit compared to progeny of other sires.

- **Quality Grade (\$QG)** represents the quality grade segment of the economic advantage found in \$G. \$QG is intended for the specialized user wanting to place more emphasis on improving quality grade. The carcass marbling (Marb) EPD, which is influenced by carcass marbling scores and ultrasound percent intramuscular fat (% IMF) measurements, contribute to \$QG.

- **Yield Grade (\$YG)** represents the yield grade segment of the economic advantage found in \$G. \$YG is intended for the specialized user wanting to place more emphasis on red meat yield. It provides a multi-trait approach to encompass ribeye, fat thickness and weight into an economic value for red meat yield.

Beef Value (\$B): an index expressed in dollars per head, is the expected average difference in future progeny performance for postweaning and carcass value compared to progeny of other sires. The \$B value combines the contributions of \$F and \$G.
